INDEX

— A —

Acid rain, 44
Adaequatio, 8
  developing, 10
Agriculture, effect of transportation project on, 103
Air, noise and water impact analysis, 106
Air-based (atmospheric) systems, 52
Air-cushion vehicle, 82
Air foils and lift, 83
Air/fuel ratio, 78
Air pollution, 43–45
  types of, 77–78
Air quality analysis, 107
Air quality impacts, 107–108
Alternative fuels, 41–43
Alternative Motor Fuels Act of 1988, 42
American Association for the Advancement of Science (AAAS), project 2061, 48
American Industry Project, 50, 195
Angle of attack, 83
Anti-lock braking systems, 87
Assessment
  alternative procedures in, 255–256
  assumptions of, 243
  comparison to grading, 243
  criterion, domain and norm-referenced tests, 255
  of curriculum, 251–252
  definition of, 241–242
  evaluation, 251
  formative versus summative, 242
  implementing curriculum changes, 256–257
  instruction, 246
  models of, 244
  motivation for learning, 249–250
  of personnel, 252–254
  preassessment, 246
  presenting meaningful material, 247–249
  role of practice and retention, 250
  of the school, 252
  setting goals and objectives, 244, 246
  of student performance, 254
  student readiness, 247
Atmospheric environment, transportation systems in, 20
Automatic braking system, 86
Automatic leveling, 87
Ayres, Robert U., 5

— B —

Barriers to change, 10
Behavior analysis method of curriculum selection, 199
Biological impacts of transportation project, 106–111
Biotechnologies, 10
Buoyancy, 83–84
Business
  effects of the transportation project on, 102–103
  integration with transportation technology education, 171

— C —

Carbon dioxide, 44
Carbon monoxide, 43–44, 77
Cavitation, 88
CFCs, 45

Coefficient of drag, 80–81
Combustion theory, 78
Communication, integration
between transportation and, 47
Community cohesion, 105
Compression ratio, 78
Computer-aided dispatching, 89
Computerized design, 93
Computer programs, for
environment impact analysis,
107–108
Concepts, and intellectual
processes, 27
*Conceptual Framework for
Technology Education*, 156
Constant velocity transmissions, 87
Context, Input, Process and Product
(CIPP), 244
Control
definition of, 24
relation to transportation, 24–25
Control systems, 21
Control technology
anti-lock braking systems, 87
automatic braking system, 86
automatic leveling, 87
constant velocity transmissions,
87
related technological concepts,
87–88
wing tip vortex, 87
Creativity in the technologies, 2–3
Criterion-referenced test, 255
Cultural paradigm, shift in, 9
Curriculum, assessment of, in
transportation technology
education, 251–252
Curriculum changes,
implementation of, 256
Curriculum guides for
transportation technology, 59–62
Curriculum structure and content,
for technology education, 21–22

— *D* —

Democratic society, roles and
responsibilities in a, 6–8
Diagnostic appraisal, 243
Discrepancy Evaluation Model
(DEM), 244
Domain-referenced tests, 255
Drag, coefficient of, 80–81
Dynamometers, 91–92

— *E* —

Economic development, and
transportation, 16–18
Economic impact
of transportation, 39–40
of transportation project,
102–104
Education in a technological
society, 1–3
Electronic controls, 74
Elementary level transportation
technology education, 117–128
evaluation in, 125
instructional strategies, 119
laboratory facilities, 125–126
philosophical basis, 117–118
sample units, 121–125
selecting learning activities,
119–121
student displays, 128
tools and supplies, 127–128
transportation technology
content, 118–119
Energy, and transportation, 40–43
Energy efficiency, improved, 41
Environment, definition of, 97
Environmental impact
connotation of, 97–98
description of, 100–113
Environmental impact report
alternatives, 101–102
biological impacts in, 106–111

description of project, 100–101
economic impacts of, 102–104
project status, 101
public disclosure requirement for, 111–112
social impacts of, 104–106
transportation benefits, 101
transportation purpose, 101
Environmental planning, 223
Environmental pollution, 43–45
Environment impact statement. *See* Environmental impact report

— *F* —

Feedback systems, 92
Florida, curriculum in, 193–194
Formative evaluation, 242
Freight modes, 52

— *G* —

Geography, integration with transportation technology education, 171
Global markets, and transportation technology, 16–17
Goals, in technology education, 244, 246
Grading, comparison to assessment, 243
Greenhouse effect, 44
Guidance, definition of, 24
Guidance systems, 20
categorizing of, 25–26
Guidance technology
navigational systems, 85
smart highways, 85–86
sonar, 85

— *H* —

Higher performance engines, 76–77
High school level transportation technology education, 153–185
content structure for, 156–163
instructional facilities, 181–184
instructional methods, 161–163
philosophical statement, 155–156
program scope, 156–158
program sequence, 158–161
rationale for study, 154–155
school curriculum, 164–173
student learning activities in, 174–181
Horsepower, 80
Hull design, 82
Human adaptive systems
definition of, 1
technical means as critical variable in, 1–3
Hydrocarbons, 45, 77–78
Hydrofoils, 82

— *I* —

Illinois, curriculum in, 51, 60–61, 154
Indiana, curriculum in, 51, 154
Industrial Arts Curriculum Project (IACP), 50, 195
Industrial Teacher Education Directory, 34, 202
Industry and Technology Education curriculum guide, 59, 1586
Instructional facilities, for teaching transportation technology, 181–184
Instructional unit, developing and assessing in transportation technology, 257–258
Intellectual processes, and concepts, 27
International Technology Education Association (ITEA), and rationale for the study of technology, 36
Invent America, 121

— J —

Jackson's Mill Curriculum Theory, 34, 46–47, 50, 51, 57, 59, 154, 156, 200–201, 208, 224

— L —

Lab facilities, for middle school transportation, 150
Land-based (terrestrial) systems, 52
Lanthanum-strontium copper oxide, 84
Learning centers, in elementary level transportation technology education, 126
Learning environment for transportation technology education, 223–224
  changing facilities, 226–27
  characteristics of, 225–26
  curriculum structure for, 224–26
  dynamic testing, 233–34
  funding, 236–37
  group meeting/design area, 229–31
  learning environment instructional areas for transportation, 229–235
  options for changing to transportation, 227–29
  prototyping lab, 232–233
  relationships between instructional areas, 235–236
  research center, 231–240
  selecting and evaluating equipment, 235
  storage, 234–35
  taxonomy of, 224–25
Levitation, 84
Literacy, in technology education, 4, 8–10, 258–260
Logical Instructional Model, 244, 245
Louisiana, curriculum in, 135

— M —

Magnetic levitation, 81–82
Marine environment, transportation systems in, 19
Marine guidance systems, 55
Materials technology, 89–90
Math, integration with transportation technology education, 171
Medical accessibility, impact of transportation project on, 104
Mesoscale analysis, 107–108
Middle school transportation education, 131–150
  awareness of technology in, 139
  correlated construction activities in, 138–139
  curriculum in, 133–134
  definition and characteristics of, 132
  evaluation of learning in, 149
  evolution of, 131–132
  jointly planned and taught curriculum in, 139–140
  lab facilities for, 150
  special needs students in, 141–142
  specific examples of activities in, 143–149
  student in, 133
  student learning activities in, 142–143
  tool use skills in, 140–141
  transportation technology in, 134–141
Military preparedness, impact of transportation project on, 104
Minnesota curriculum model in, 51, 60–61
Missouri, curriculum in, 118, 154

Modified technological processes, in technological method, 64–65
Motivation, in assessing transportation technology education, 249–250
Multipurpose room, in elementary level transportation technology education, 126

— *N* —

National Environmental Policy Act of 1969, 98–100, 111
Navigational systems, 85
New York State, curriculum in, 61–62, 154
Nitrogen oxides, 44–45, 77
"No Build" alternative, 103
Noise abatement walls, 109
Noise pollution, 45
Noise quality, 108–109
Norm-referenced tests, 255
North Carolina, curriculum guide from, 61–62

— *O* —

Objectives, in technology education, 244, 246
Ohio, curriculum in, 51, 118–119, 192–193
Olympics of the Mind, 121
Ozone, 45

— *P* —

Participatory democracy, 47
Passenger mile, 36
Passenger modes, 52–53
Pennsylvania, curriculum in, 119
Performance charts, 92
Personnel, assessment of, in transportation technology education, 252–254
pH scale, 44
Physiotechnologies, 10
Practice, role of, in assessing transportation technology education, 250
Preassessment, in transportation technology education, 246
Problem solving method, of curriculum selection, 199
Project 2061, 48
Propeller pitch, 88
Propulsion, analysis of, 24
Propulsion system, 20, 54
Propulsion technology
  electronic controls, 74
  higher performance engines, 76–77
  related technological concepts, 77–81
  solar powered vehicles, 75
  synthetic engines, 74–75
Prototype testing, 94

— *R* —

Research agendas
  in transportation, 29
  in transportation education, 29–31
Research testing centers, 90
Residential impact of constructing a project, 103–104
Retention, role of, in assessing transportation technology education, 250

— *S* —

School, assessment of in transportation technology education, 252
Science
  definition of, 12
  integration with transportation technology education, 169–170

Science Technology and Society (STS), 136
Smart highways, 85–86
Smog, 44–45, 107
Social development, and transportation, 18–19
Social goals, and strategic planning, 18–19
Social impacts, of transportation projects, 104–106
Society
  role of transportation in, 14–16
  and technical means, 3–5
Solar powered vehicles, 75
Solow, Robert M., 5
Sonar, 85
Space-based systems, 52
Space environment, transportation systems in, 20
Special needs students, in middle school level transportation technology, 141–142
Spill over effect, 102
Stall, 83
Standards for industrial arts programs project, 196
Strategic planning, and social goals, 18–19
Structural systems, 21
Student displays, in elementary level transportation education, 128
Student learning activities
  in middle school level transportation technology, 142–143
  in transportation technology, 174–181
Student performance, assessment of, in transportation technology education, 254
Student readiness, in transportation technology education, 247
Summative evaluation, 242
Supercharging, 79
Superconductivity, 84–85
Support systems, 21, 26, 55
Support technology, 88–89
  computer-aided dispatching, 89
  materials technology, 89–90
Suspension, 26
  definition of, 55
Suspension systems, 21
Suspension technology
  air-cushion vehicle, 82
  hull design, 82
  hydrofoils, 82
  magnetic levitation, 81–82
Synthetic engines, 74–75
Systems integration, 46
Systems method of curriculum selection, 199

— T —

Taxonomy of transportation, 22–27, 51–55
Technical means
  creation and use of, 1–2
  as critical variable in human adaptive systems, 1–3
  and literacy, 4
  and society, 3–5
  and the wealth of nations, 5–6
Technical subsystems, 54–55
Technical systems
  design of, 9–10
  in transportation, 20–21
Technological society, education in, 1–3
Technological capabilities, enhancing, 6
Technological enterprise, and transportation systems, 28–29
Technological method, 63–65
Technological society, literacy requirements in a, 8–10

Technology
creativity in, 2–3
definitions of, 11
science of, 11–12
state-of-the-art, in transportation systems, 72–90
structure of the discipline, 13–14
study of, 11–12
Technology education
curriculum structure and content, 21–22
literacy in, 258–260
theory-practice gap in, 51
Technology Education in Pennsylvania Program Guide, 119
Technology/mathematics/science interface, 47–48
Tennessee, curriculum in, 135
Terrestrial and aquatic ecosystems, effects of transportation project on, 110–111
Terrestrial transportation systems, 19
Texas, curriculum guide from, 61–62
Thrust, 80
Torque, 79–80
Tourism, impact of transportation project on, 103
Transition temperature, 84
Transportation
application of universal systems model to, 56–58
definition of, 34
and economic development, 16–18
economic impact of, 39–40
and energy, 40–43
impacts of, 57–58
integration between communication and, 47
methods of testing, research and development in, 90–94
need for studying technical aspects of, 71
policies, 19
reasons for teaching, 36
research agendas in, 29
role of, in society, 14–16
and social development, 18–19
study of, 19–20
taxonomy of, 22–27, 51–55
technical systems in, 20–21
Transportation corporations, 16
Transportation curriculum, evolution of, 49–51
Transportation industries, technological direction and goals for, 71–72
Transportation mix, 17–18
Transportation projects, 97
biological impacts of, 106–111
social impacts of, 104–106
Transportation safety, 43
Transportation spending, 17
Transportation system
environmental mediums, 52
modes, 52, 54
state-of-the-art technology in, 72–90
and the technological enterprise, 28–29
universal concepts, 54–55
using the taxonomy for content selection, 55
Transportation technology
assessment for curriculum, 241–261
curriculum guides for, 59–62
developing and assessing an instructional unit in, 257–258
present development in, 71–94
teaching components of, 48
technical social and biological impacts of, 97–114

Transportation technology
education, 1–3
definition of, 226
in the elementary school, 117–128
in the high school, 153–185
lack of acceptance in, 33–34
lack of identifiable linkages in, 35
lack of understanding in, 34–35
learning environment for, 223–237
methods of teaching, 62–65
in the middle school, 131–150
reasons to teach, 45–48
research agendas in, 29–31
taxonomy of, 22–27
time and distance perceptions, 37
Transportation technology education in elementary school. *See* Elementary level transportation education
Transportation technology teacher education, 189–217
activity selection, 212
characteristics of contemporary, 199–200
course offerings, 206–207
courses, 208–211
distinctions between I.A. power technology and, 200–202
general education, 203–205
historical perspective of, 190–196
laboratory and other facilities, 217
model for, 203–217
philosophical basis for, 190–202
professional studies, 205–206
rationale for, 196–198
related activities, 212–217
specialty studies, 208
status of current, 202–203
Transportation-trained technologist, role of, in preparation of environment impact statement, 95–112

— *U* —

Universal systems model, application of, to transportation, 56–58
Utah, curriculum model in, 51

— *V* —

Vehicle weight, 90
Virginia, curriculum in, 135

— *W* —

Water-based (marine) systems, 52
Water pollution, 45
Wealth of nations, and technical means, 5–6
West Virginia, curriculum guide from, 61–62, 118, 154
Wind tunnels, 91
Wing tip vortex, 87
Work areas, in elementary level transportation technology education, 126
